First flip the floor elements facing the panels down and attach them to each other with screws. Then flip the floor back with the panels facing up

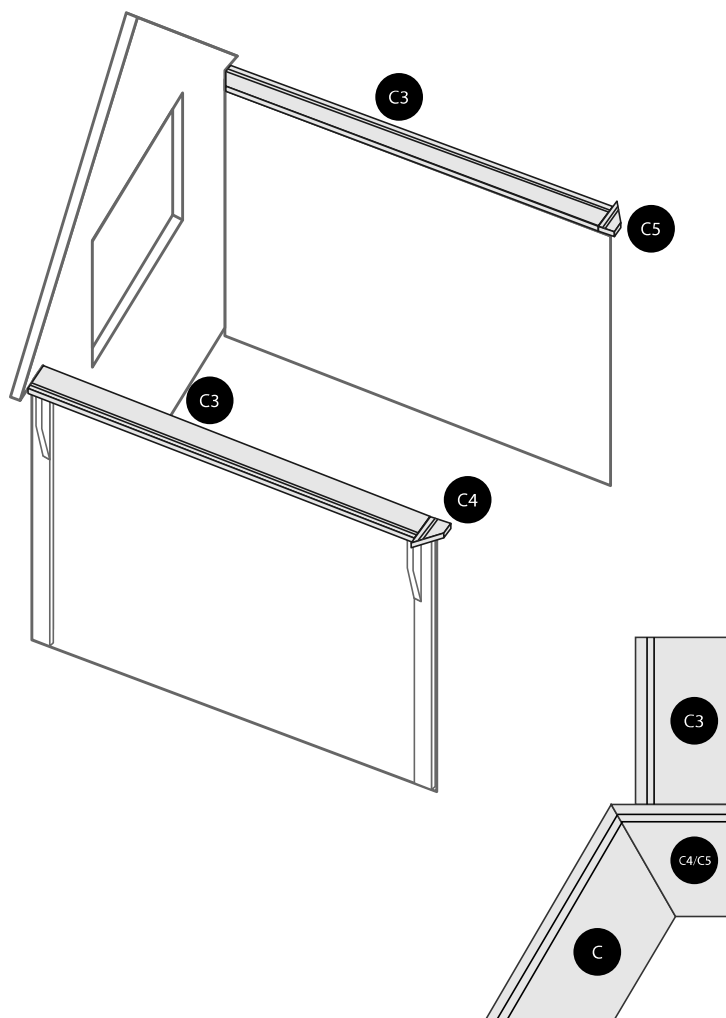

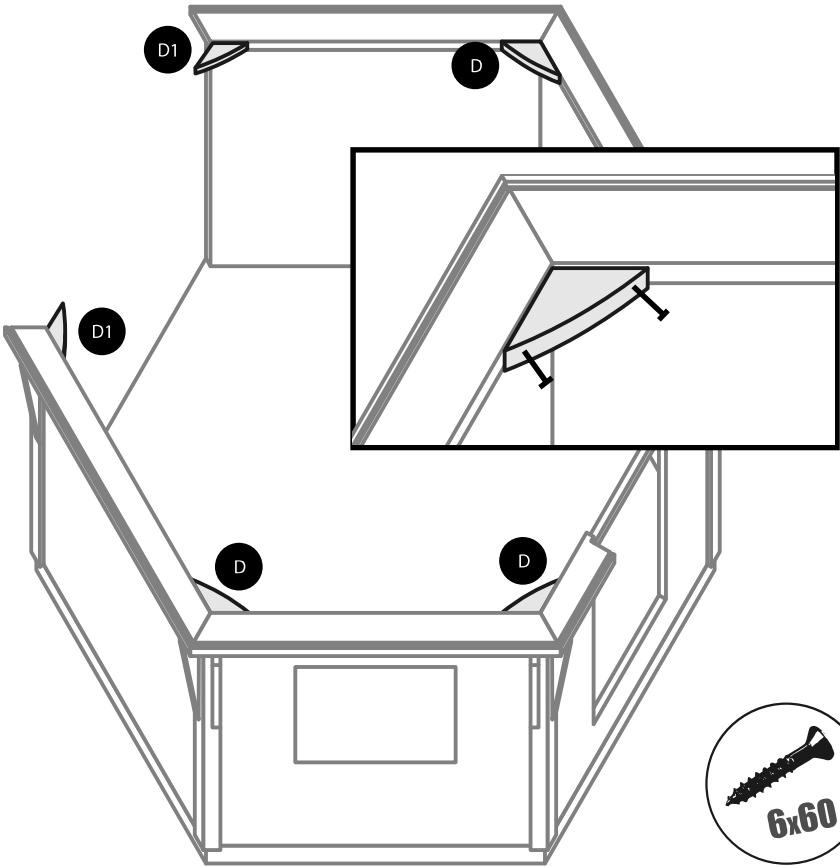

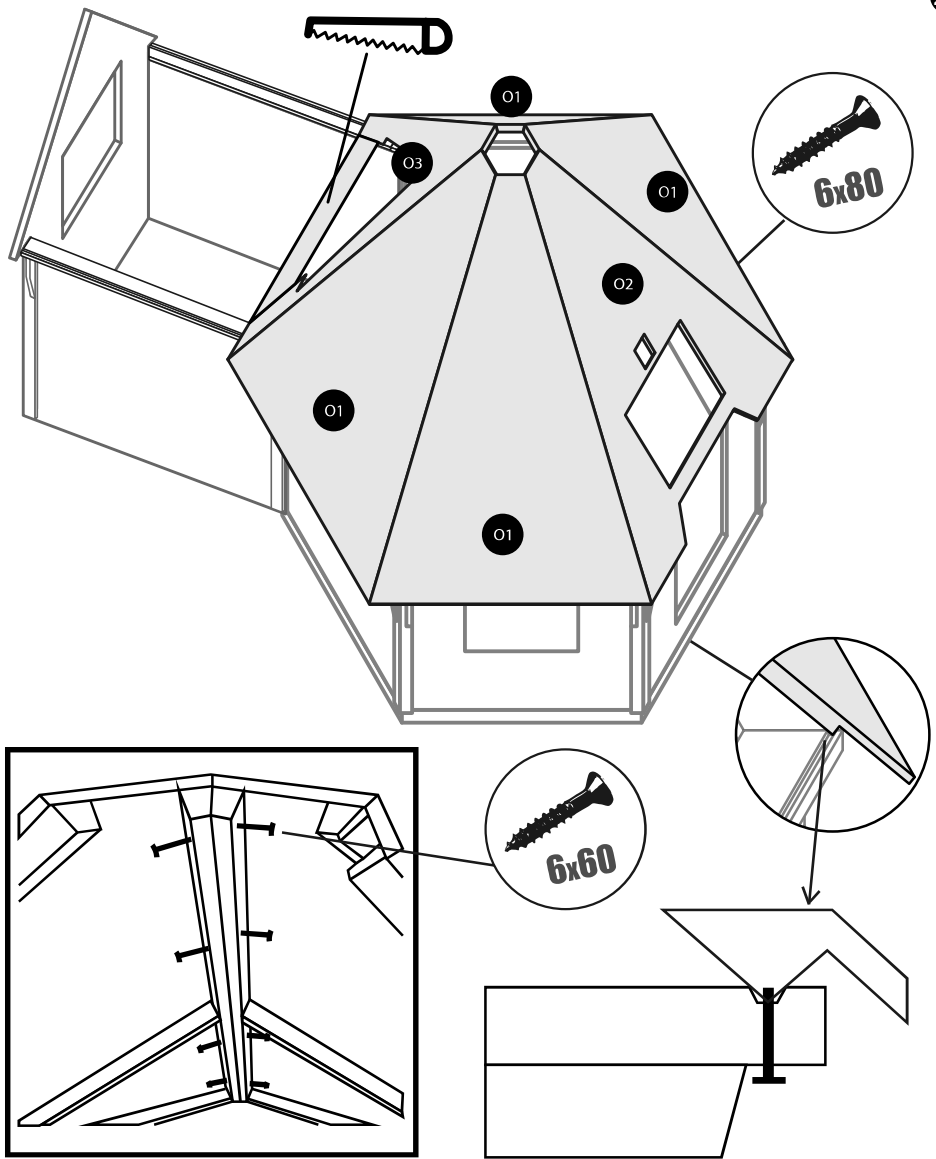

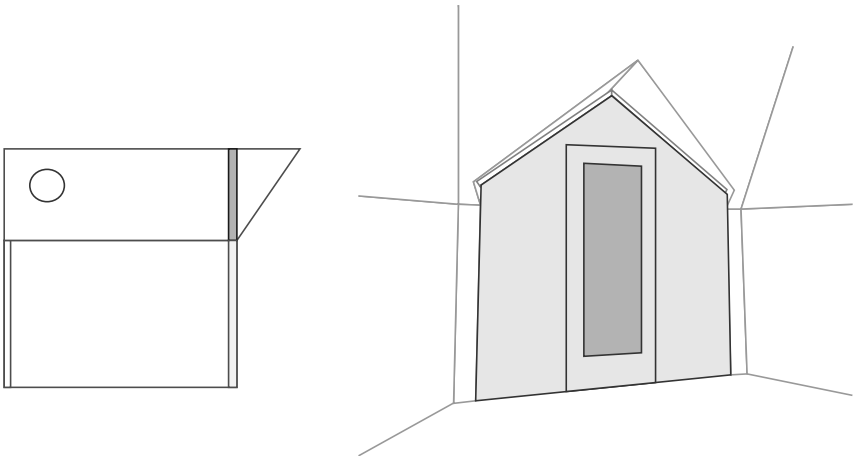

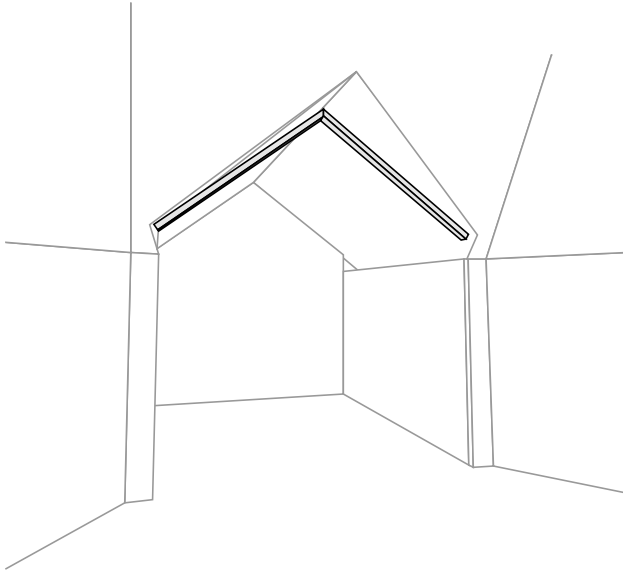

Make sure the planks inner edge is even with the walls inner side and that the corners fit nicely.

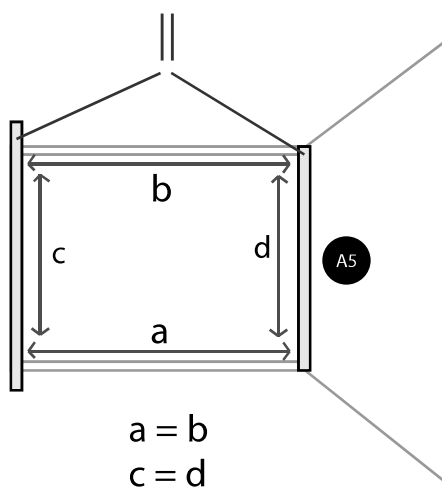

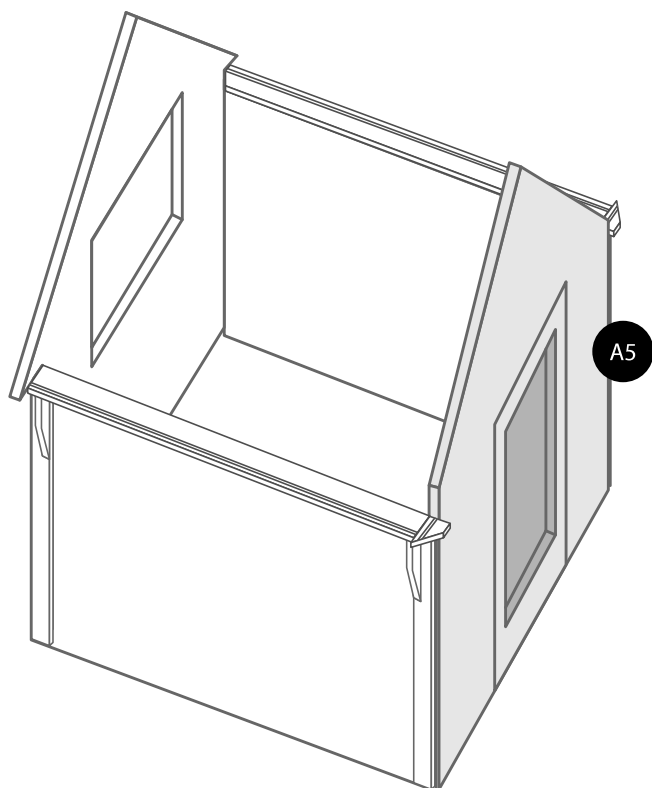

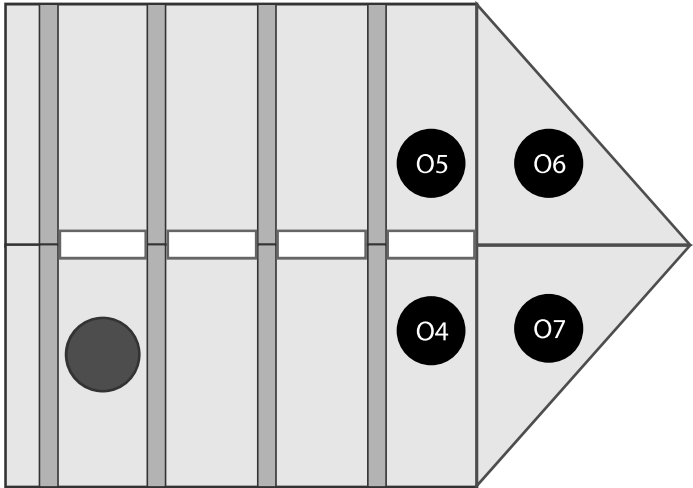

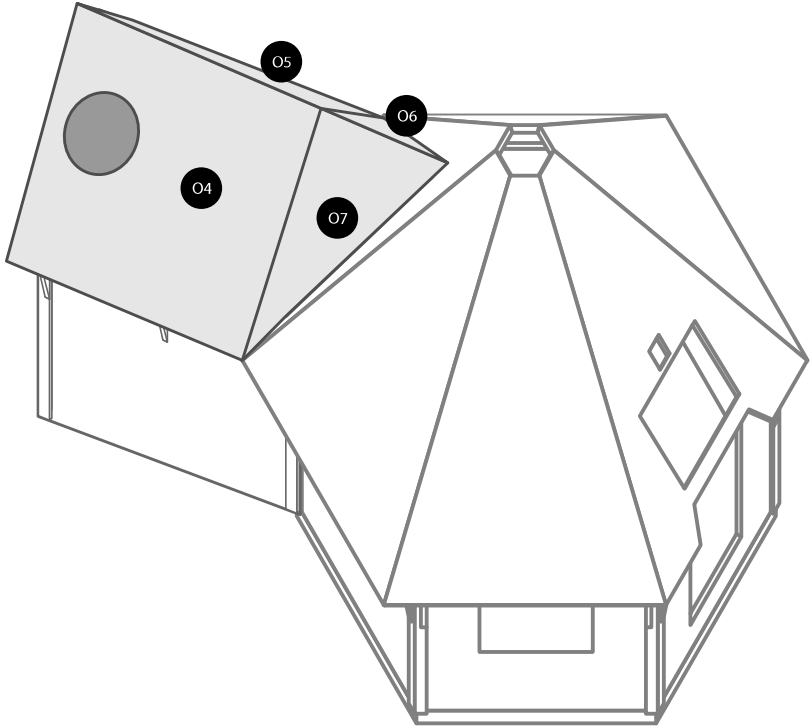

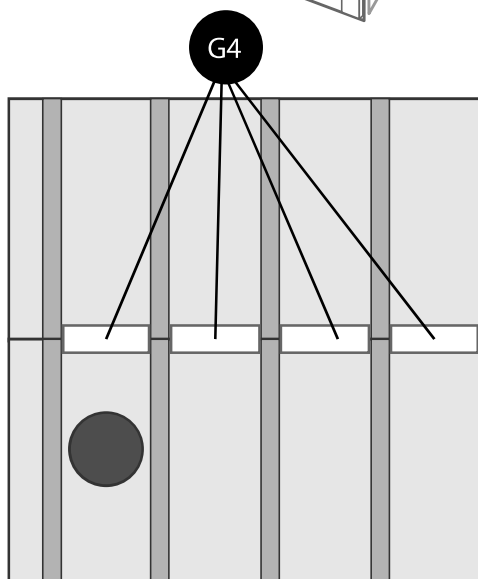

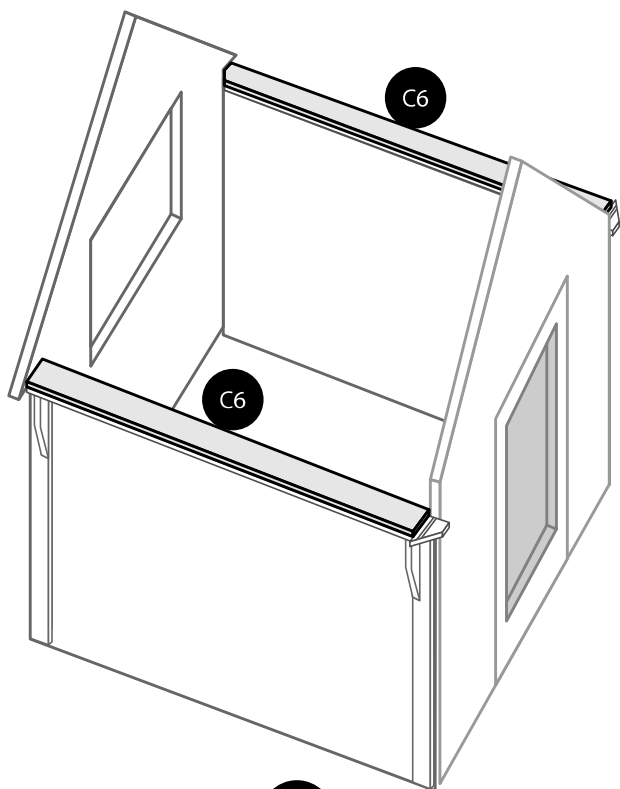

Be sure to provide support for each roof element while assembling. Use 8 screws to attach wall elements to one another and another 4 from under the brim planks. Make sure when placing the roof element with door hole (O2) that the gaps are even to the wall element's.

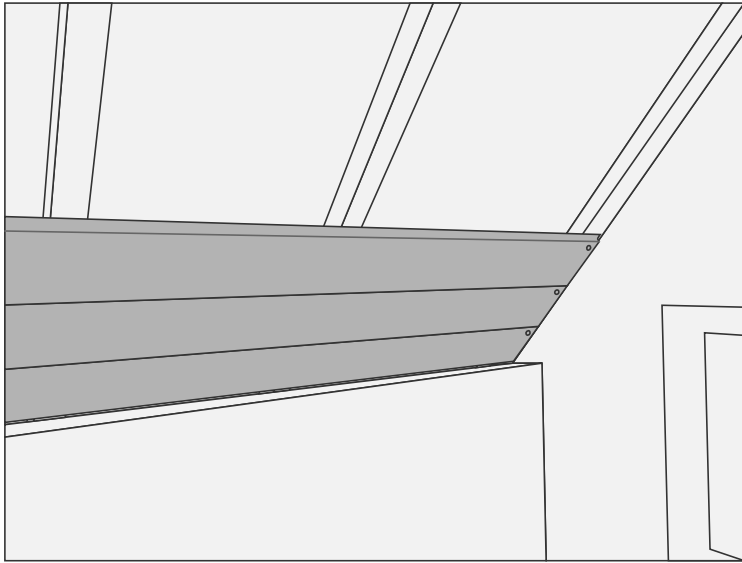

The extra rafters to help secure the divider wall need to be attached to the roof right above the divider wall parallel to it.

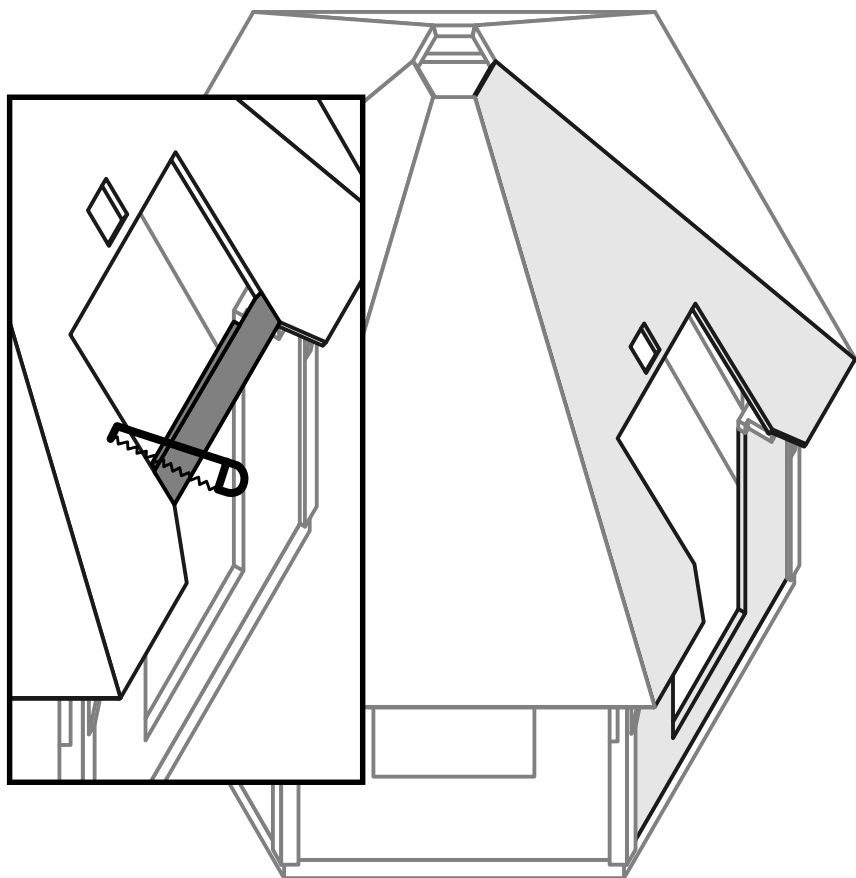

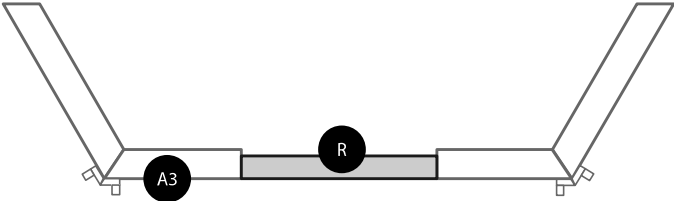

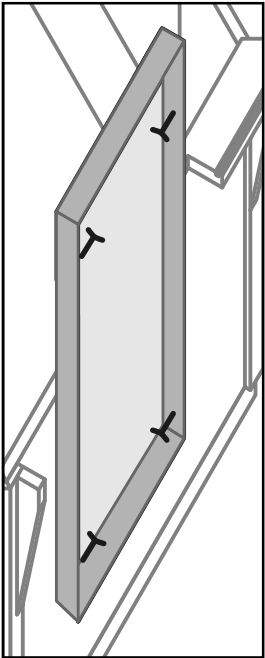

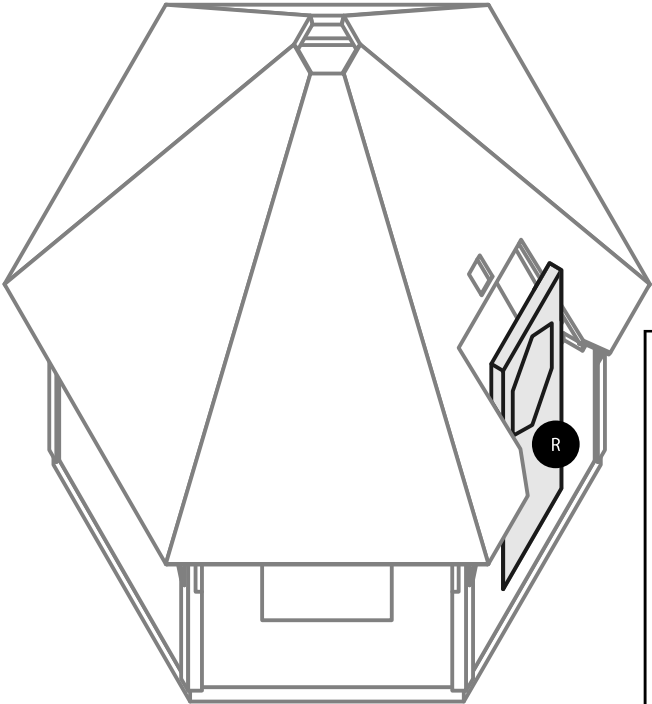

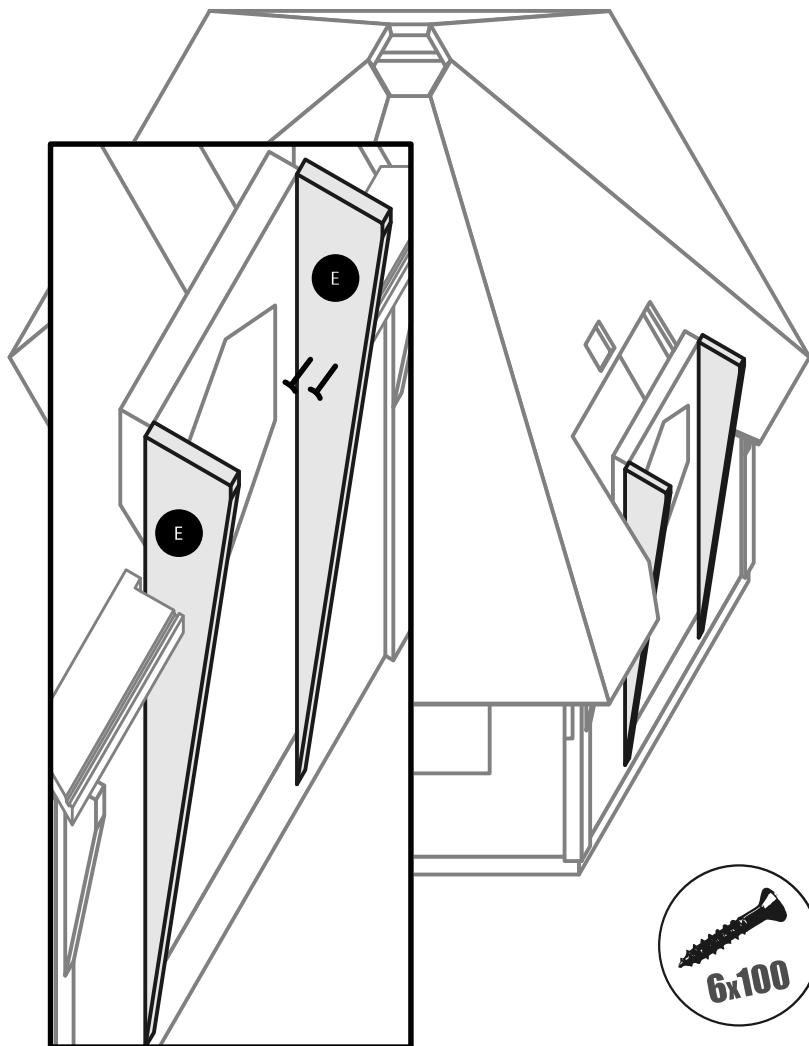

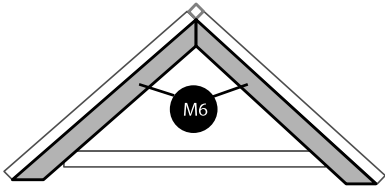

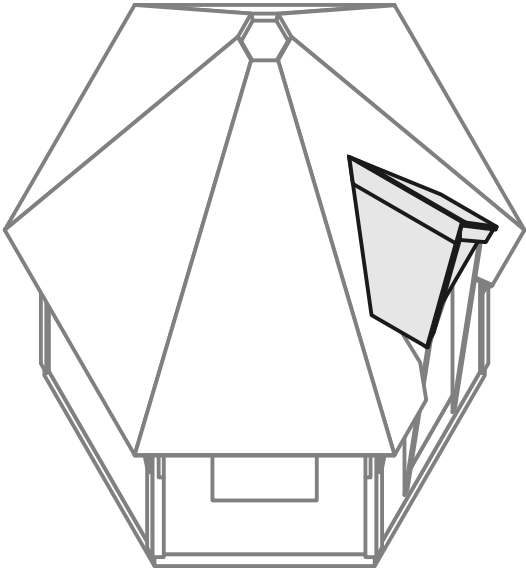

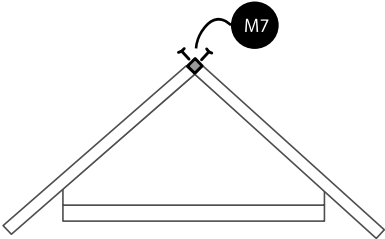

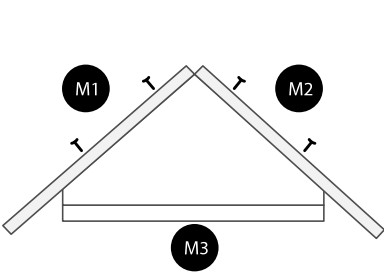

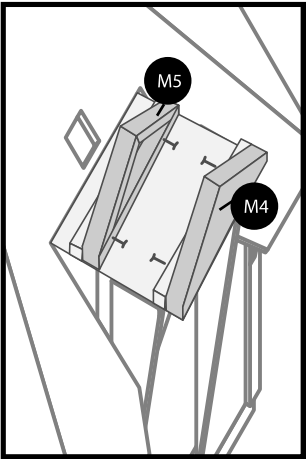

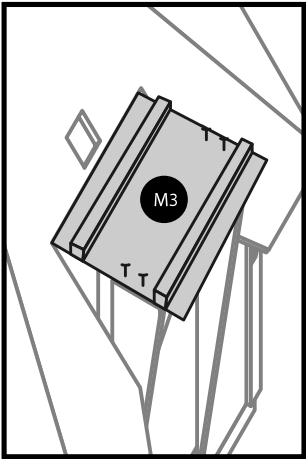

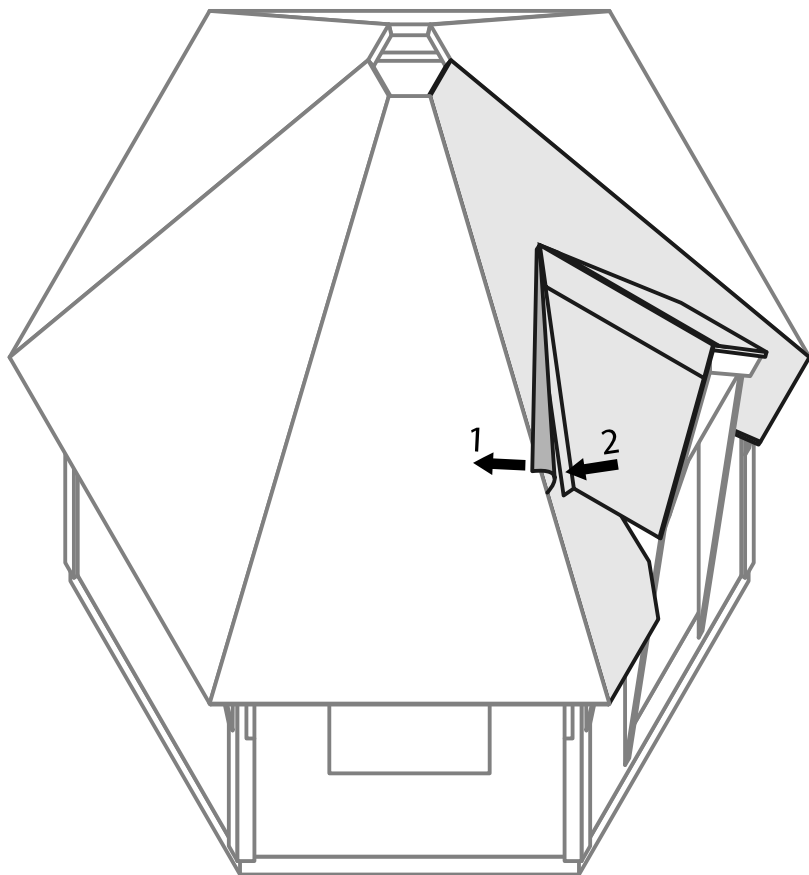

In case of a sauna model, a second inner roof layer needs to be attached plank by plank. Isolation can be added during this step if desired.

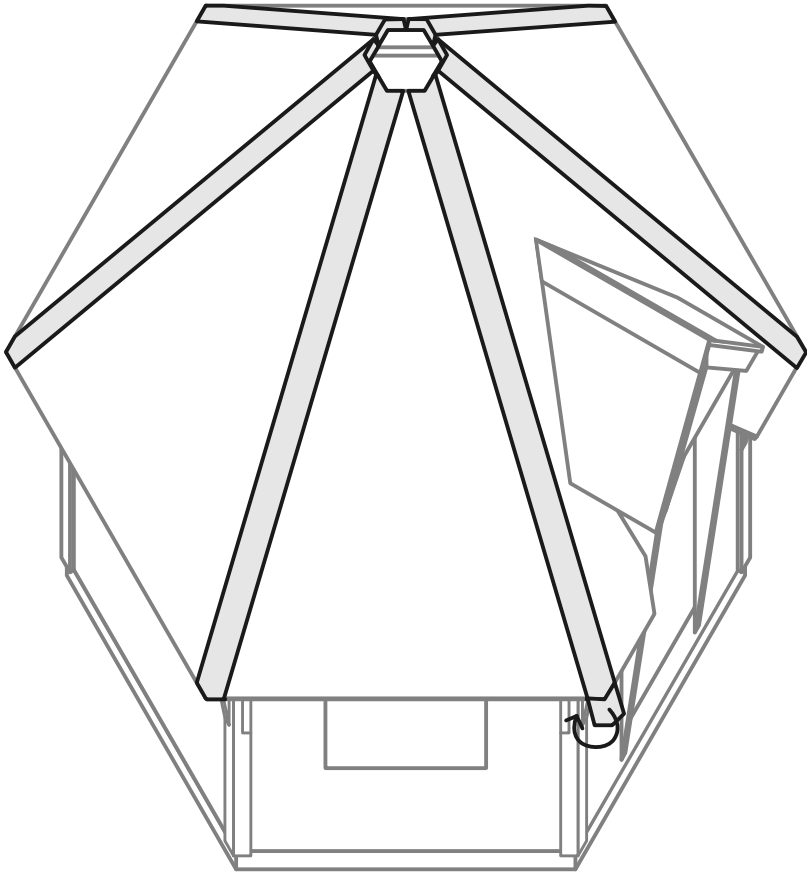

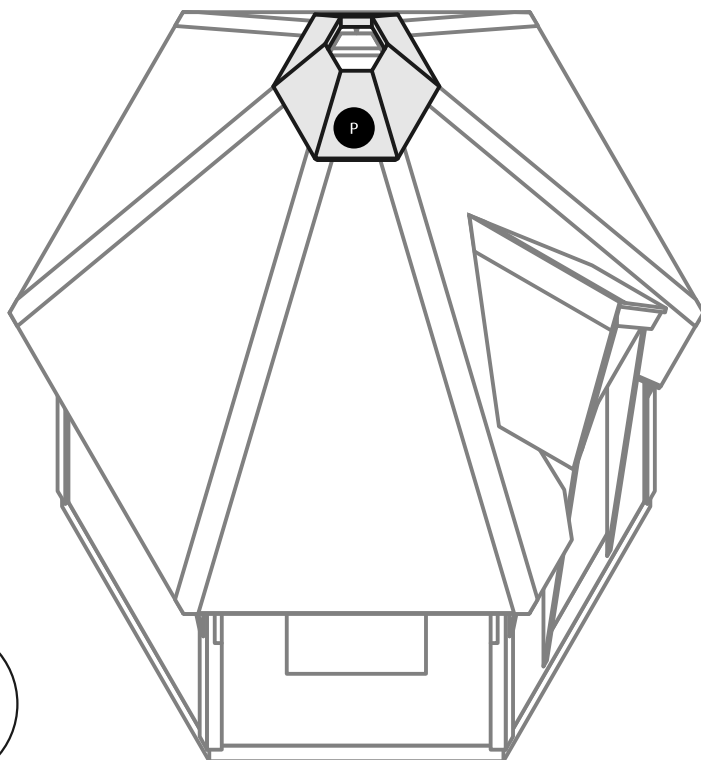

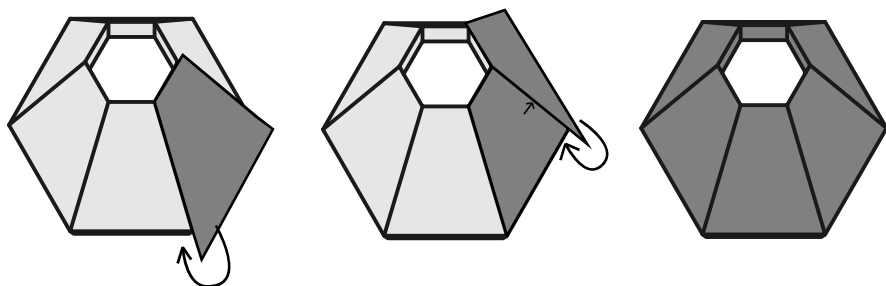

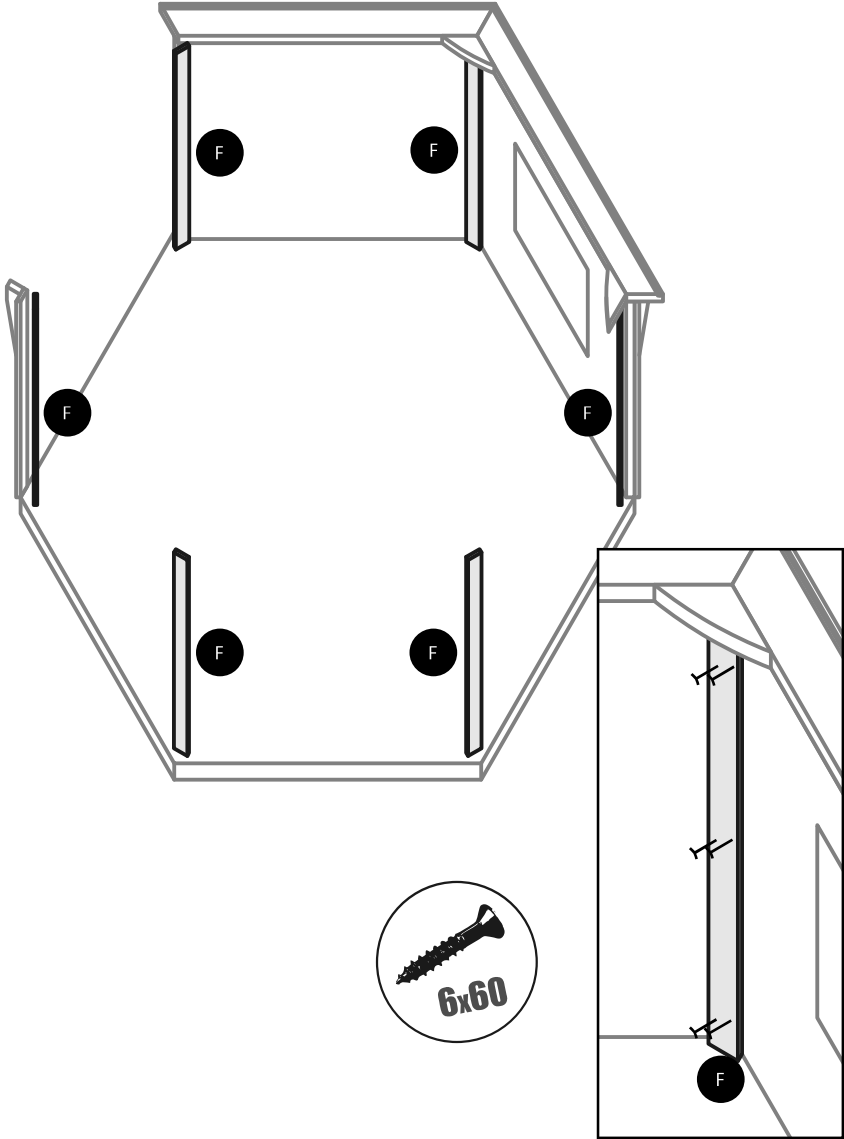

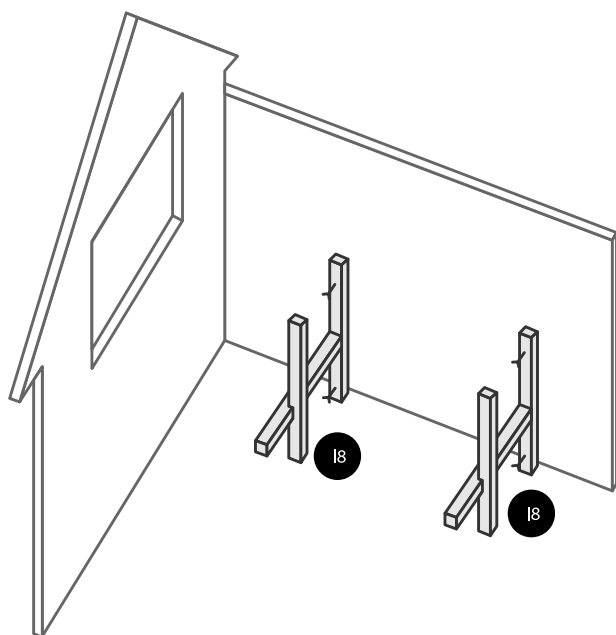

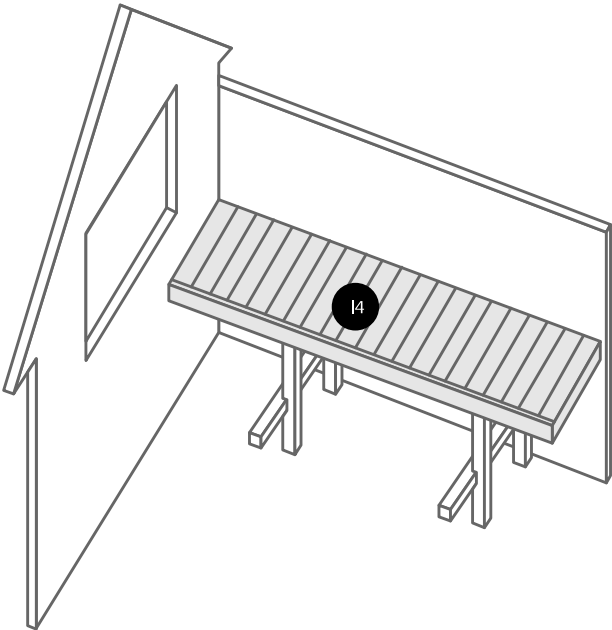

Attach peak plates to the connecting brims of the roof elements. Use felt nails. The lowest plate should be placed 7cm over the lower brim, flipped under the eaves and secured with nails.

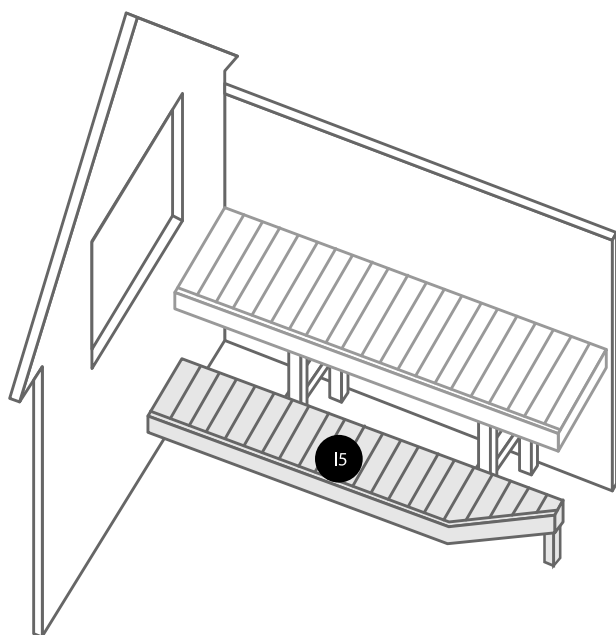

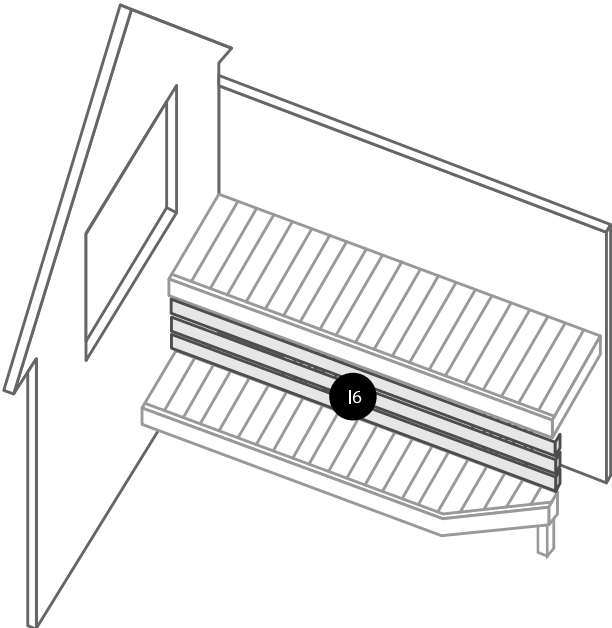

Attach the roof hat to the roof elements from below with 3 screws.

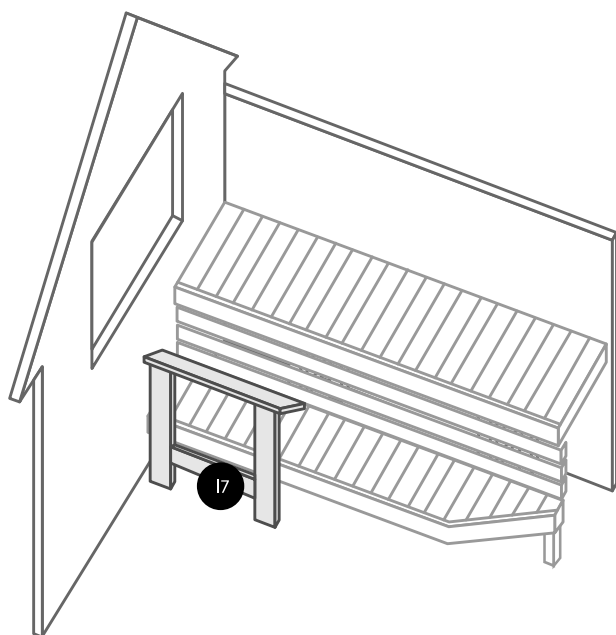

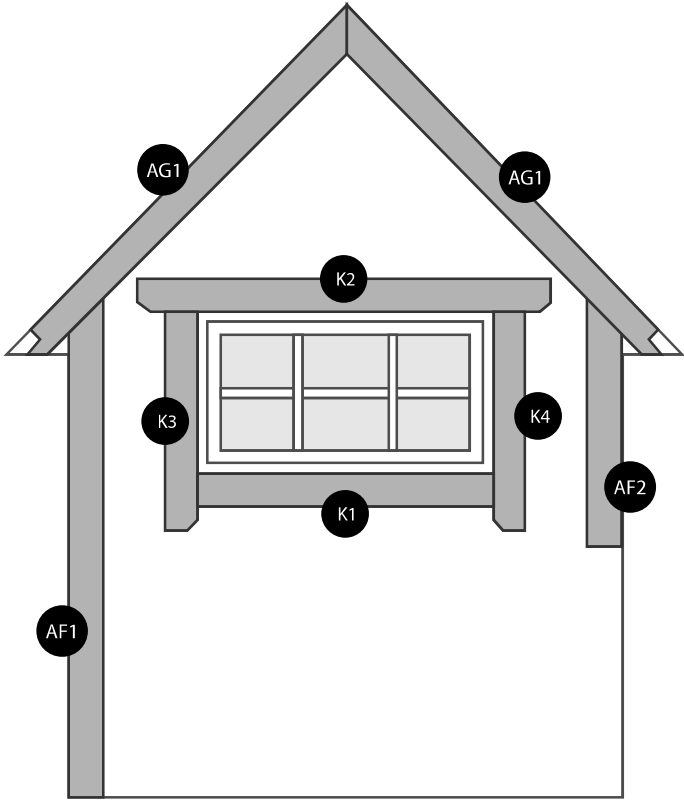

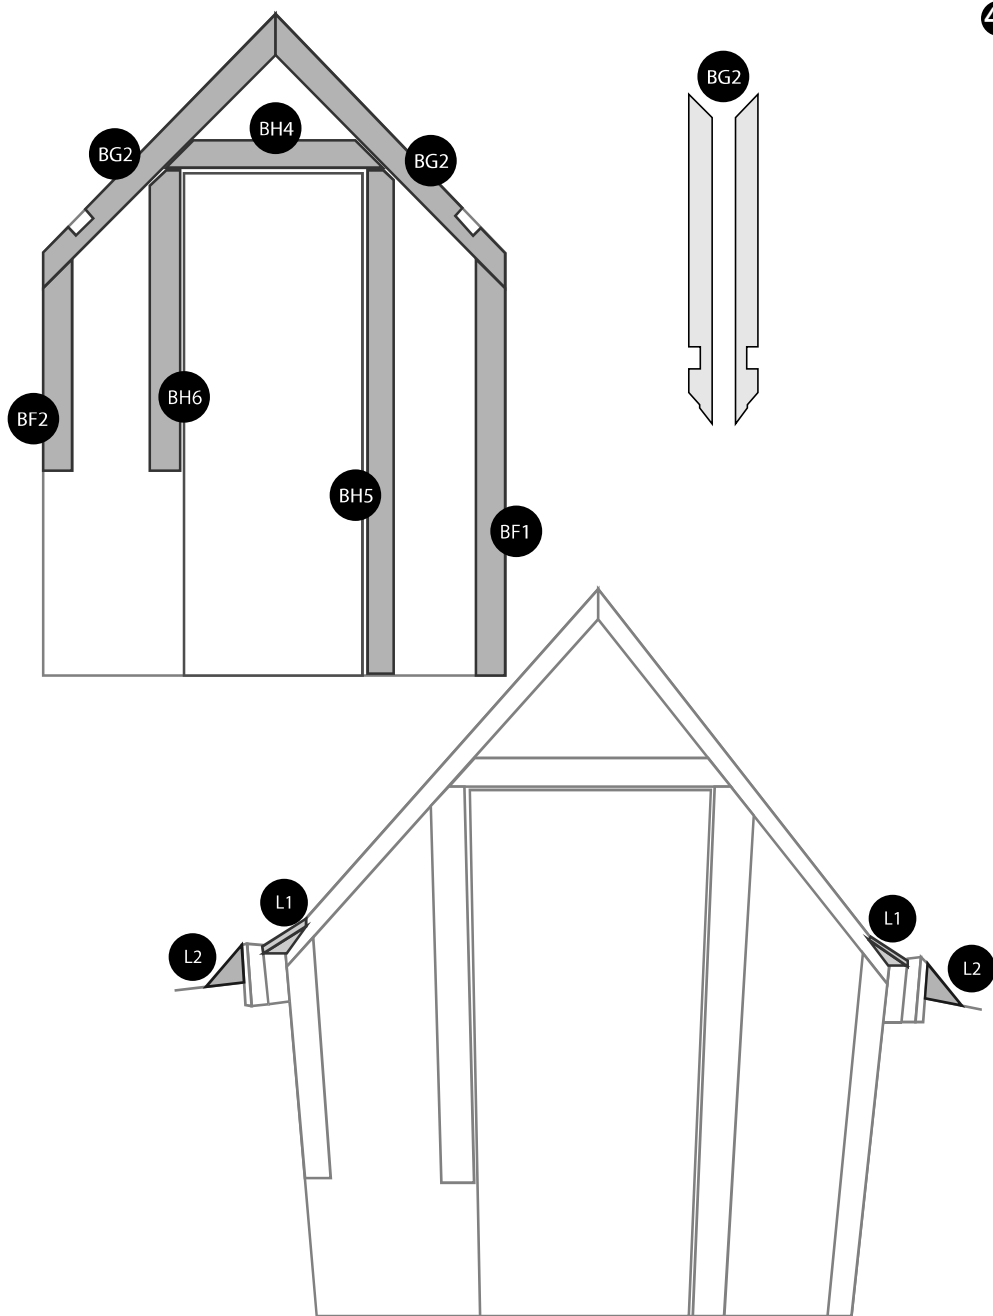

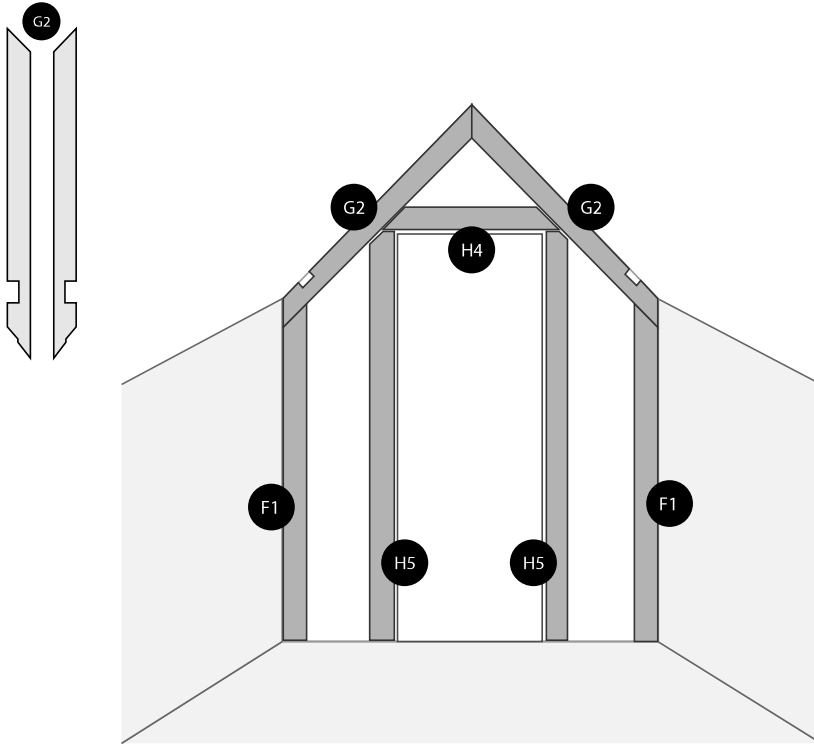

View of outer wall of the sauna room from the inside.

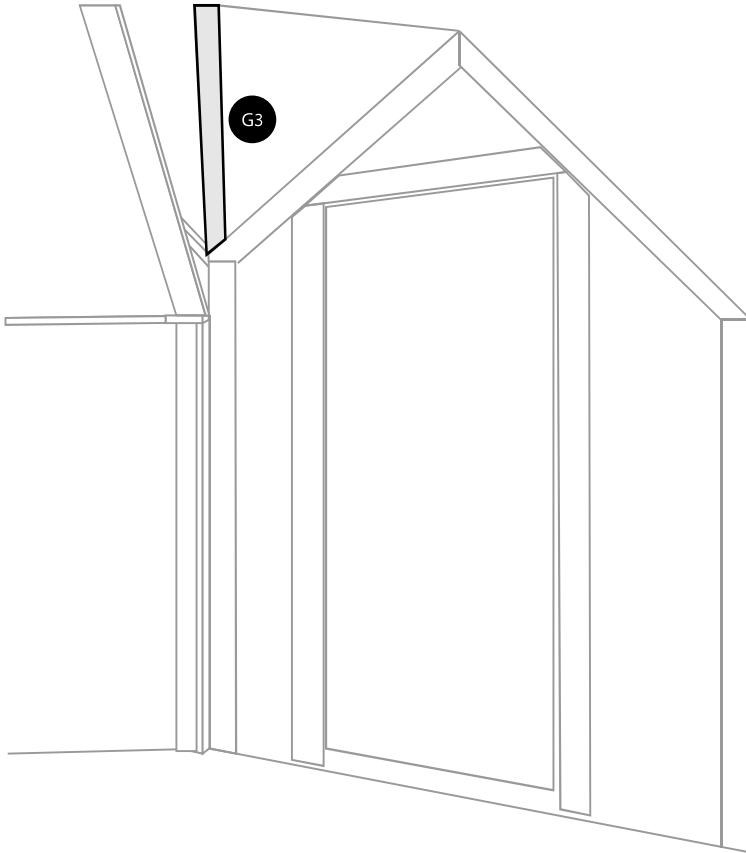

View of divider wall from the sauna room.

Before attaching the BG2 strips, some cutting is needed to make them fit.

Before attaching the G2 strips, some cutting is needed to make them fit.

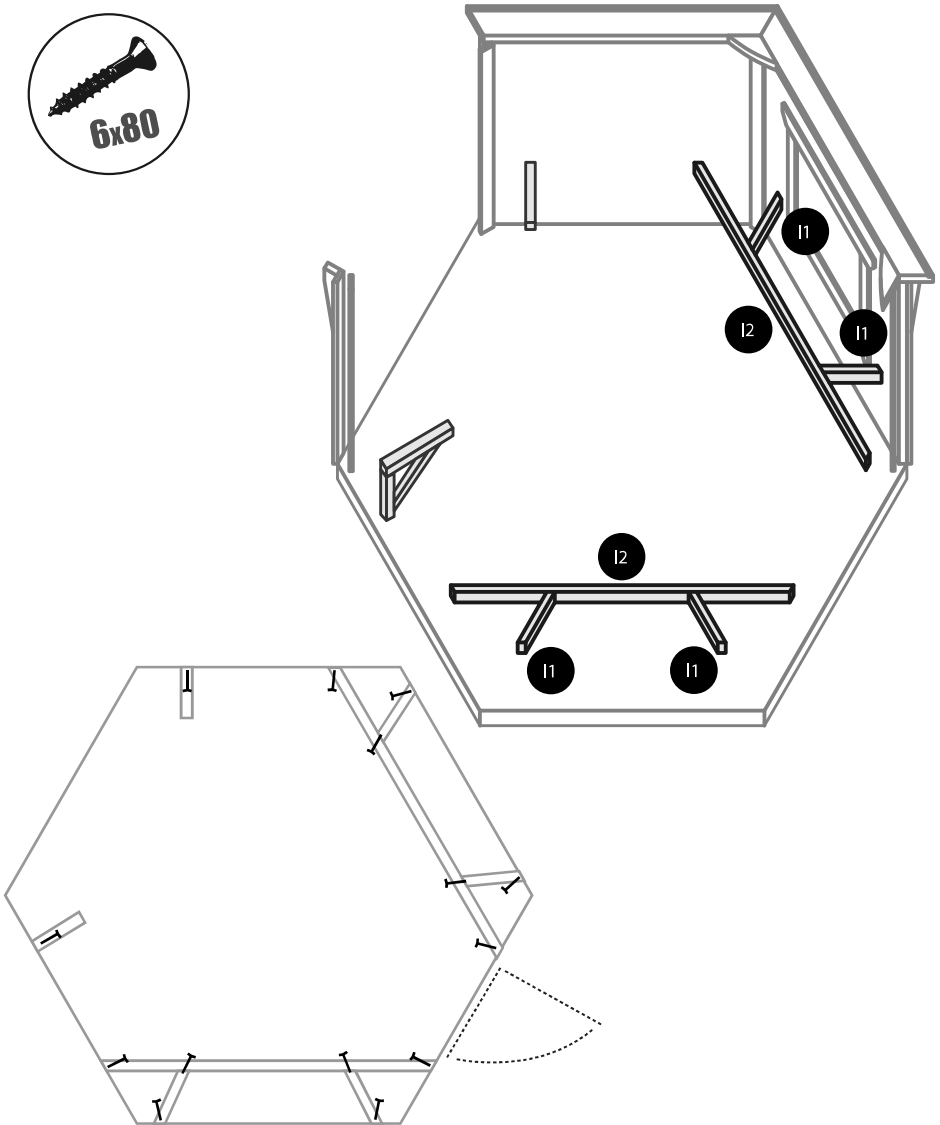

View of divider wall from the grill room.

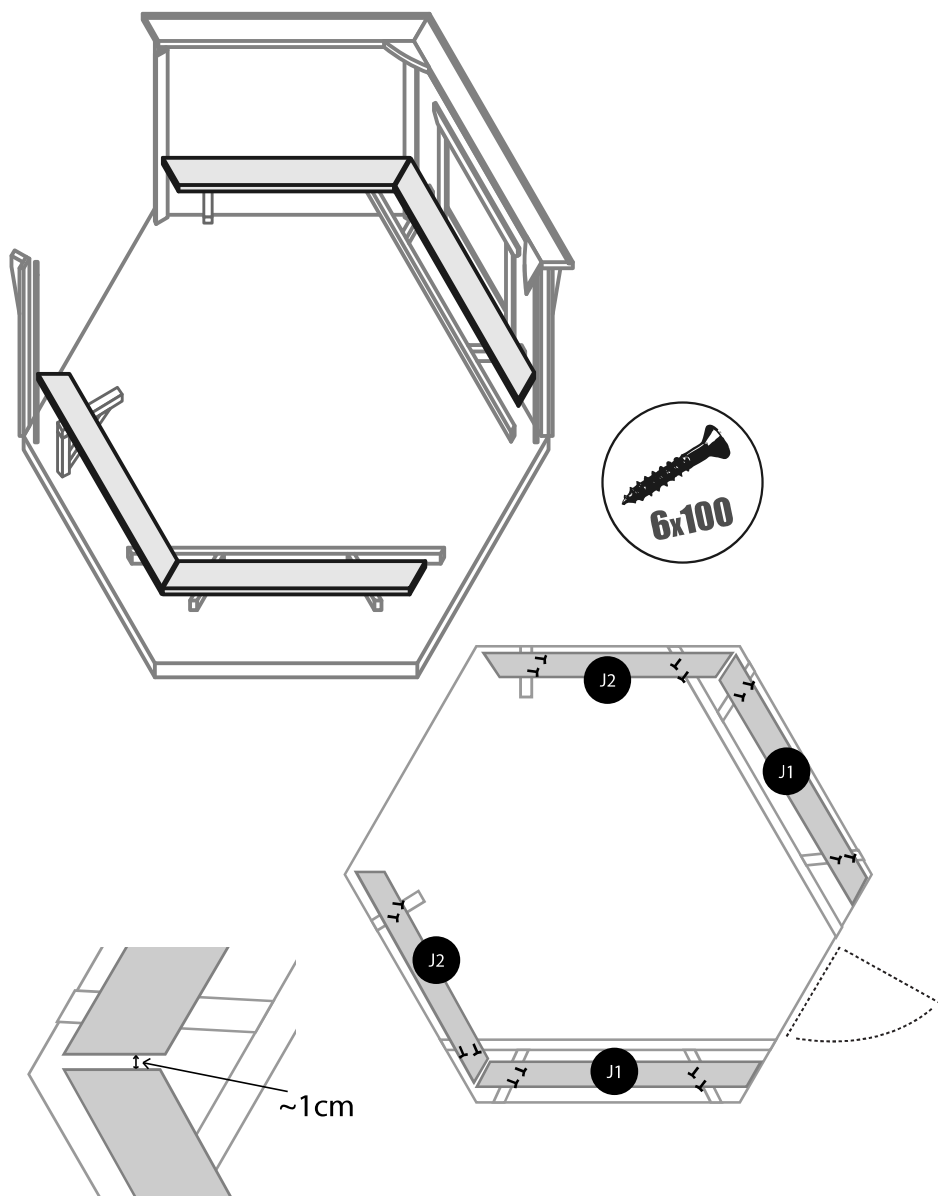

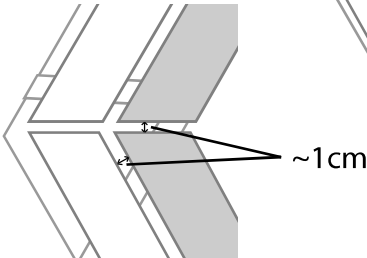

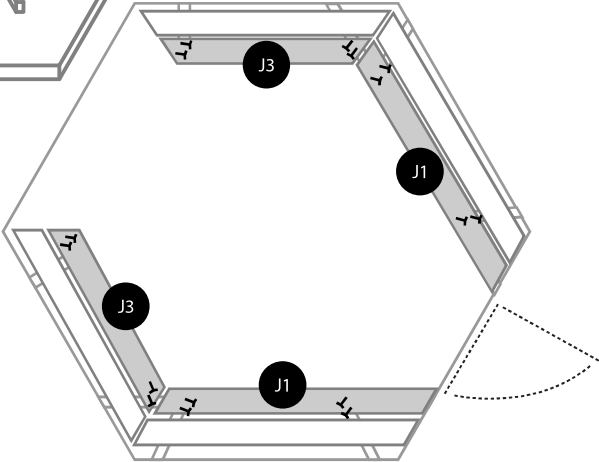

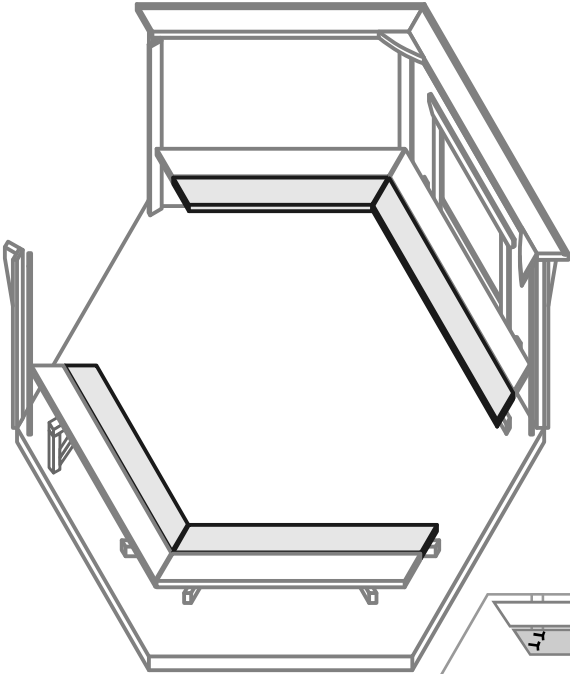

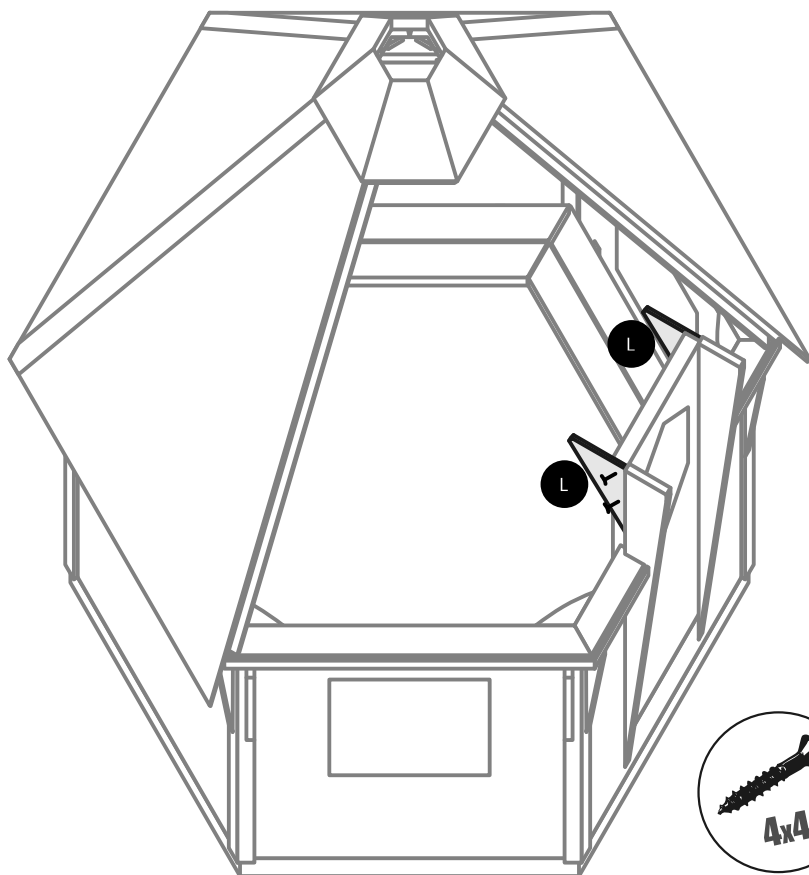

Attach the window strips inside the grillhouse. Strips are attached to the frame with ca 1.5cm overlay.

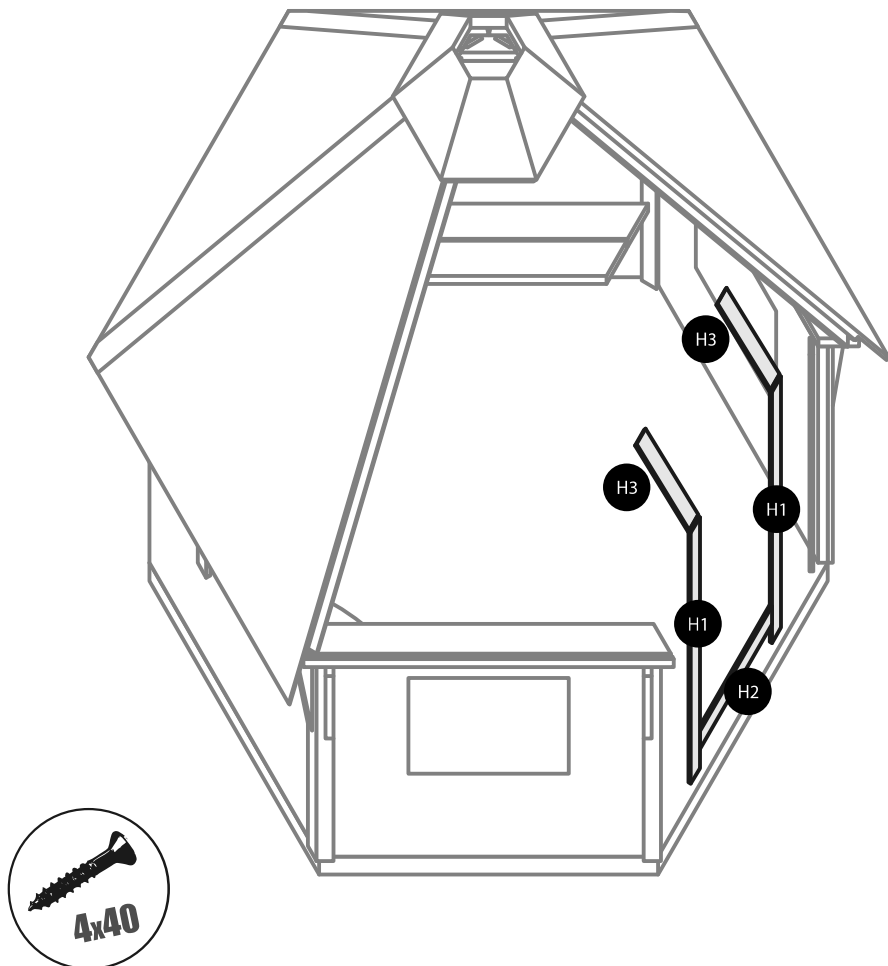

Attach the bench beams by first attaching the longer detail to the wall elements from the ends. Make sure they are parallel to the wall. Then attach the two shorter details to the previously attached detail and to the wall with 10 screws total. Beams should be placed 39cm above the floor.

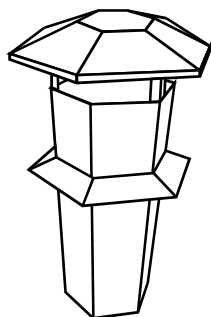

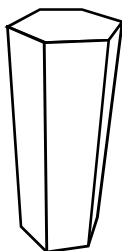

Attach door strips inside the grillhouse. The strips are attached to the door frame, wall element and roof element with 3 screws per detail.
